NBI 000127 Highlight bar should scroll down with the cursor.

Wisconsin

Not being delete until WI does so -The blue highlight bar should scroll down the screen with the cursor. The simple blinking line cursor is difficult to see compared to the highlighted bar which makes it easy to see which item being filled in.

This requires a change to the GUI.

NBI 960090 Initialize Model Titles

Info Tech

Add an option to the model profile that set a default value for all model title (instead of having to set each one individually).

Contract Monitoring TAG request reomoval by the State -

G-67 99-04LRWP16 Cost Plus Time Bidding

Michigan (9508-G01)

Roll all cost plus time issue into one ehancement per resolution -We need an efficient method to allow contractors to bid on the length of time it will take to complete the project work as well as the cost. The proposed time then factored in the decision to award the contract. A cost per day is assigned for the inconvenience the construction is going to take. The cost is multiplied times the number of days the contractor bids. Once the contractor is awarded the number of days bid is used as a baseline against which incentives and penalties are computed, but the value of the number of days times the cost per day is not included in the awarded total for the contract. We need Trns•port to allow a section of items in the proposal that are used to compute the low bidder but not carried over into the awarded contract.

RESOLUTION This TAG recommends combining all of the Cost + Time (ie. Lane Rental, A+B, and Incentive/Disincentive) innovative contracting ballot items into one enhancement item. Consideration of the effect this ballot item will have on all of TRANSPORT modules will need to be made. Support will be provided, as needed, to Info Tech. - The preliminary analysis of this work item indicates that there are several possible approaches to implementing this functionality in Trns•port. A detailed analysis of the requirements of the states will be necessary to determine which approach will be most effective. Since the implementation of this functionality will probably affect most if not all Trns•port modules, the scope of the implementation effort is large.

NBI 990642 Scroll List Vertical Bar Not Functioning Properly

Ohio

Scroll list verical bar must be fixed or alternative ways of moving through long lists and tables need to be added. The scroll bar won't go to the bottom and jumps close to the bottom immediately so you can not page down by clicking below the bar. (e.g., Browser ITEMSLIST, can not search for item beginning with '501' (described later) so trying to move down with bar, can't do that so trying to page down clicking below bar, can't do that. Forced me to leave mouse and use page down key. [See separate issue regarding overall clumsiness of being forced to jump back and forth between mouse and keyboard beyond what is reasonable and necessary.]

Contract Monitoring TAG request reomoval by the State -

Add VCR button and "go to" options to provide alternatives if buffer size for scroll bar can't be increased enough.

<i>Module</i>	<i>Number</i>	<i>Scope</i>	<i>Title</i>	<i>Reported By</i>
NBI	990654	Medium	Cannot Move Directly to a Column in Browse Data	Ohio
<p>Browse data lost the ability to move directly to a column. The column headers are difficult to read and it takes a long time to find the column you are searching for.</p>				<p>Contract Monitoring TAG request reomoval by the State - not possible with current browser technology (DSS 6.0)</p>
NBI	990656	Medium	Better Logic for Browse Data Filter	Ohio
<p>Browse data filter has a different logic and format than the view and model Subsetting/Picks tabs. They do basically the same function but look different. For example, Subsetting/Picks offers EQ, EQ:, NE, etc. while the filter has =, <=, <>, etc. and has no way of doing begins with (EQ:).</p>				<p>Contract Monitoring TAG request reomoval by the State -</p>
NBI	990658	Small	Print Windows Appear Differently	Ohio
<p>Print windows are different - printing from inside report vs. right mouse click on report name.</p>				<p>Contract Monitoring TAG request reomoval by the State -</p>
NBI	990665	Medium	Misleading Blank Lines at Bottom of List Windows	Ohio
<p>The blank line at the bottom of list windows that really have more lines below is very misleading. Along with other things such as the dysfunctional vertical scroll bar, it makes the software seem somewhat user-unfriendly.</p>				<p>Contract Monitoring TAG request reomoval by the State -</p>
NBI	990667	Small	Change the pick color function	Ohio
<p>Picking colors is clumsy. You can't type in the color name. You have to scroll from top to bottom every time.</p>				<p>Contract Monitoring TAG request reomoval by the State -</p>
NBI	990668	Small	Retain Previous Entry for Subsetting Picks/Filters	Ohio
<p>Subsetting picks and filters should retain previous entries.</p>				<p>Contract Monitoring TAG request reomoval by the State - Should be Trnsport wide - General. Part of the Graphical User Interface Object Model and would affect other modules.</p>
